

MASK MACHINE

Reference: WGM1383|ITEN

Brand: MASK

Model: MACHINE

Age c.: 2020

Product description:

Automated line capable of 7.200 masks per hour

This machine for mask production is very versatile and allows to process non-woven rolls with 3 or more layers, single lane. It performs the coupling and the central fold of the 3 nonwoven layers with welding on the 4 edges by means of a rotary ultrasound system and the cut in the length that is set by the operator. The application of the ear tapes / elastics is performed in line by a welding head activated automatically by the operator.
